

Car Showroom

A complete background music and paging system for a 6-Zone car showroom.

The DCM1e provides inputs for a background music source in addition to 3 video walls with local audio playback.

The CDR-1B remote controls allow local control over source and level in each zone.

Paging is achieved using the PM8-SA which can page to any zone in addition to allowing automated messages to be played (eg. at closing times).

Additionally an optional remote mic input (ME-1) could be added to allow for a microphone to be connected for Live events & presentations.
