

How to Wire the Facility Port Adaptor (FPA-1)

The FPA-1 is a retro adaptor allowing Clouds Active Input wall plates to be used with any hardware or head unit that dose not have a Facility Port fitted.

A Facility Port is Clouds unique interface for serving Clouds external active wall plates (BT-1, LM-2 etc) and is available on Z4, Z8, 46-50, 46-120 & MA40F,T&E Series models.

The FPA-1 can also be used as a range extender for Facility Ported use, although the standard range of over 1.5Km is already very impressive.
